

*Von den zwei kursiv geschriebenen Ausdrücken ist jeweils einer nicht richtig. Streich ihn durch:*

Your skin makes you waterproof, keeps out *wild animals / germs* and stops you getting too hot or cold.

Your skin has two *main layers / antennas* – an outer layer of *artificial / dead* cells called the epidermis, and an inner layer of living cells called the dermis.

Your hair and *fingers / nails* are growing all the time. If you do not *colour / cut* your hair, it will normally grow to about *a meter / a kilometer* long, then stop.

We have *hundreds of / five* senses: sight, hearing, smell, taste and touch.

You *feel / see* with your eyes. Your eye lets in *water / light* through *a round window / big door*, called the pupil. Behind the pupil is a *wall / lens*. This makes a picture of what you are *looking at / listening to* on the back of the eye.

You *sing / hear* with your ears. Sounds are *birds / vibrations* in the air. Your ears gather *sounds / flowers* from outside, and *tiny / giant* bones inside your ear make them *happier / louder*.

You smell with your *chin / nose*. Smells *in the air / from heaven* come in through your *nose / hair* as you *walk / breathe*.

Your *mother / tongue* tells you whether food is *bright / sweet*, salty, bitter or *dark / sour*. Your *hard disk / sense of smell* also helps you to taste *things / noise*. When you cannot smell *silly / properly*, many foods taste *similar / endless*.

You sense *touch / love* through nerve endings in your *lungs / skin*. You can sense if things are hot or cold, *soft / British*, hard, sharp, wet or *crazy / dry*.

Your *hand / skeleton* is made up of more than 200 bones. It holds up your body and gives it *food / shape*. Your skeleton also protects the *iron / soft* parts of your body, such as your *brain / bike*.

Bones are *floating / hard* on the outside, but there are softer, living *fish / cells* inside. Some big bones, like your thigh bone, are filled with bone *marrow / traffic*. This is a soft tissue that makes new cells for your *red wine / blood*.

You have more than *six / 600* muscles in your body. Many of them are attached to your *umbrella / bones*. Together, your muscles and bones *leave / move* your body. Some muscles, such as the ones that help you breathe, work even when you are *abroad / asleep*.
